

## COMBINATIONS FOR CONSERVATION LOW-WATER LANDSCAPING BOOK

**PROJECT PURPOSE:** There are many low-water plant books that list a variety of drought-tolerant plants suitable for water-conserving landscapes. However, many homeowners are often intimidated by the information and unsure of how to put them together. This book aims to give homeowners and designers the confidence to create beautiful, low-water landscapes by showing them examples of plant combinations that have been successful in low-water gardens throughout the Intermountain West. The plant combinations are grouped together by water requirements and there are tips throughout the book about conserving water and efficient irrigation.

### ABOUT THE COMBINATIONS FOR CONSERVATION BOOK:

**‘Combinations for Conservation; Recommended Plant Groupings for Low-Water Landscapes’** is now available as a printed book and will shortly be available in an on-line format. Full of pictures, each page shows an actual combination of three plants and the individual plants that make up the combination. It also includes detailed design and maintenance information. 166 pages.
